

Contactless, Germ-free Solutions with Holographic Touch™

PRACTICAL SOLUTIONS FOR THE 'NEW NORMAL'

The pandemic has forever altered how we interface with kiosks and other displays and surfaces that are breeding grounds for pathogens and contaminants.

As a result, companies are actively searching for solutions to provide their employees and customers with a safe user experience.

Holographic Touch™ from Holo Industries is a practical and easy-to-implement contactless solution being used by dozens of the world's leading companies.

With this disruptive new technology, users can safely access data, watch videos, swipe, scroll, spin — even sign their name for transactions — in mid-air.

✓ Plug & Play

Avoid months of engineering time: Holo's products work out-of-the-box. Connect to smart terminals or PCs via HDMI and USB cables and instantly display images or videos as a clear holograph.

✓ Scalable

Holographic Touch Solutions are available in sizes ranging from 50mm (2") to 630mm (25"), with larger sizes coming Q1 2022.

✓ Accurate & Responsive

All systems are accurate to 2mm, with zero latency. Pinch to enlarge, zoom, scroll and swipe. Fully functional in hot and cold weather, day and night — even with gloves on!

Holographic Touch™

Products & Solutions

PRACTICAL GERM-FREE SOLUTIONS

Anywhere people congregate in large numbers and close quarters such as churches, restaurants and bars, are hot-spots for contamination and Covid-19 infection.

Restaurants, for instance, have quickly adapted to eliminate the risk of contamination with strategically spaced seating, laminated and anti-microbial menus, QR codes on cell phones, and other remedies. Many of these solutions are temporary or impractical: anti-microbial menu surfaces are ineffective over time; QR codes can be insecure or too reliant on battery power or cell reception.

Holographic Touch is a reliable and practical solution for safe, contactless interaction. The illustration below demonstrates the many ways that Holo Industries' products can be used in a fast-food restaurant to protect customers and employees:

AT DRIVE-THROUGH WINDOWS

AT THE COUNTER

AT TABLES & BOOTHS

Through the Holographic units, employees and customers can safely access the menu and order at different stations throughout the restaurant.

The rugged 200mm Holo module displays a bright menu, and is designed to be inserted into counters or stand-alone kiosks.

The units are connected to the restaurant's networks via USB and HDMI cables. Add NFC or card readers to allow pay options. Customers can even sign in mid-air!
